

PS AUDIO BHK 250 SIGNATURE

At CES 2015, PS Audio is proud to show the final pre-production prototypes of the Bascom H. King Signature 250 Amplifier. First shown in prototype form at Rocky Mountain Audio Fest in October, the BHK Signature 250 stereo power amplifier features a triode front end followed by all-MOSFET circuitry, including the output stage.

Power ratings for the amplifier are 250/watt per channel into 8ohms, 400/watt per channel into 4. The amplifier will also be available as a monoblock in the Bascom H. King Signature 300.

The BHK is the first product in PS' history to feature vacuum tubes, and is expected to be in full production by May, 2015, and will be launched at the Munich High End show. MSRP in the US market is projected at \$7499 for the stereo and monoblock versions.
